Benchmark as distributed (AnOxPePred)
1404 peptides · 687 active / 717 inactive
4 partitionings (P60–P90) · median length 4
Negative class
500 of 717 negatives are
UniProt fragments, never assayed
two negative sub-populations
separable at AUC 0.770
Study structure
133 source papers;
113 contribute one class only
source-disjoint evaluation
costs 0.023 AUC (p < 0.002)
Sequence identity
11 of 678,120 cross-fold pairs
exceed the stated threshold
control is SOUND —
leakage is not via similarity
Baseline comparison
21 features: 20 residue
frequencies + length
exceeds published AUC in
all 36 model × partition cells
What is released
source-disjoint partitions
+ the baseline as a
reporting floor
signal = Tyr, His, Trp (HAT chemistry)
